running smoothly!
Multiple V-ribbed Belt
Kits with Torsional
Vibration Dampers

Continental 
CONTITECH

Complete, reliable and perfectly matched

The new kit with torsional vibration damper from ContiTech

Original quality is the best replacement. This includes the new multiple V-ribbed belt kit with torsional vibration dampers from ContiTech. The kit contains a CONTI-V MULTIRIB® belt as well as a torsional vibration damper (TVD) or torsional vibration damper isolator (TVDi). The new kit is available for common diesel engines

Prevention and cost-efficiency

In many vehicles there is a TVD that absorbs the vibrations of the crankshaft. Modern diesel engines in particular could no longer be operated without these belt pulleys. In the case of TVDi, the belt drive of the auxiliary assembly is also isolated, saving wear and tear on the belt and the driven assembly. To ensure that the drive system functions smoothly, the TVD/TVDi should always be checked when replacing the belt, and be replaced, if necessary. From an economic point of view, it makes sense to replace the TVD/TVDi and the belt in one procedure.

Numerous advantages

Workshops are playing it safe whenever they replace the belts and TVD or TVDi at the same time, especially since the components are then perfectly matched to each other. This also provides mechanics with the best possible means of protecting themselves from possible warranty claims. In addition, workshops benefit from the fact that they need not order parts individually, and that the parts are also cross referenced to each other. Furthermore, one kit means that just one item has to be ordered, thus simplifying the administrative tasks involved in processing and receiving goods. And only one storage area is needed to store several pieces. ContiTech's new complete package is the logical next step in its philosophy of providing kits for the industry.

Original equipment quality

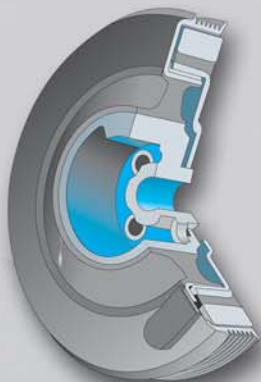

As original equipment supplier, ContiTech develops and manufactures timing belts, V-belts and multiple V-ribbed belts for all leading carmakers. The OE products are also available in original-equipment quality for automotive aftermarket requirements. The torsional vibration dampers and torsional vibration damper isolators contained in these complete packages also of course meet this OE standard.

Without good damping, nothing would work. Play it safe with the new kit from ContiTech!

Torsional Vibration Damper (TVD)

Torsional Vibration Damper Isolator (TVDi)

Impressive advantages:

- Original equipment quality
- Enhanced safety for engine and vehicle owner
- Individual parts need not be ordered
- Precise cross-referencing
- One contact for all components

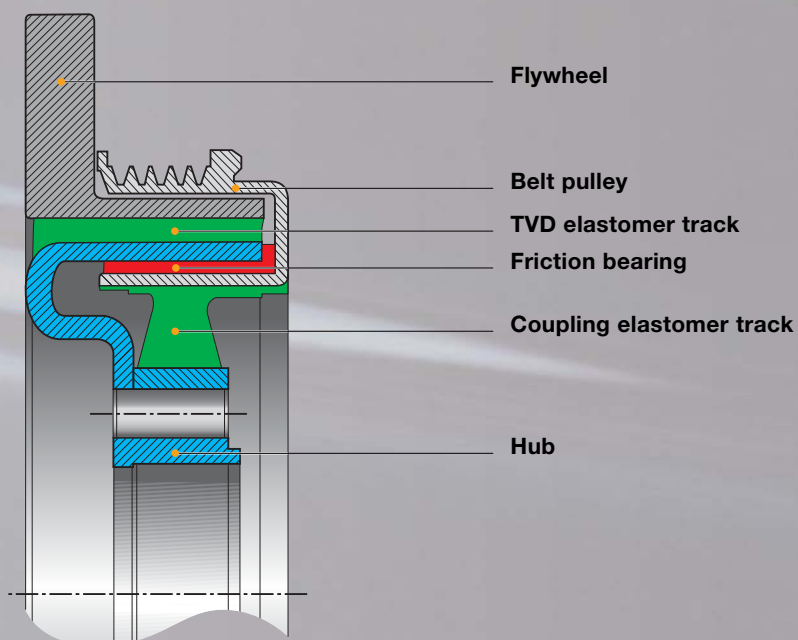

Comprehensive parts kit:

- CONTI-V MULTIRIB® belt
- Torsional vibration damper
- or
- Torsional vibration damper isolator

CONTI-V MULTIRIB® belts
