

ContiTech Air Springs – Engineering Next Level

The new generation of ContiTech Air Springs is made from extremely fire-safe materials and is fully compliant with the highest requirements in European fire protection standards (EN 45545, Hazard Level 3).

In the pantograph a ContiTech Air Spring generates the necessary pressure for securing a reliable contact between contact strip and overhead line.

With our extended experience in product and material design we are committed to pushing safety standards to a new level.
